

# The Joint Institute for Nuclear Astrophysics

## Math, Science, and Technology (MST) Program @ MSU 2009

JINA sponsored the first-ever Nuclear Astrophysics course in MSU's Math, Science, and Technology (MST) camp.

A two-week (July 13-24) residential camp for middle school students, MST offers the opportunity to explore several subjects. Nuclear Astrophysics attracted the highest enrollment of any course this year, with twenty students spending two hours each day with JINA faculty and staff. Topics ranged from explosive nucleosynthesis to high-energy cosmic rays.

The program was very well-received by participants and lecturers, and MST is excited to have JINA offer the course again next year.
