JINA staff and students from Notre Dame, Michigan State University, and Granger High School guided participants through hands-on activities and demonstrations at the 1st annual JINA Exhibit ND vs MSU Tailgate. The goals were to not only expose children to the wonders of science, particularly nuclear astrophysics, but also to demonstrate that while Notre Dame and Michigan State are competitors on the field, they're collaborators off the field.

Students from ND and MSU explain nuclear reactions to children using magnetic marbles to model the nucleus and a gravity-based accelerator.
